IBM Sites Services

Building solutions from IBM

New construction, conversion, renovation or modernisation of your buildings or your relocation operations, ranging from the basic utilities to the installation of intelligent networks, call for a competent and reliable partner.

Thanks to many years of experience throughout the world in the project planning and realisation of office buildings, computing centers and production buildings, we have accumulated expertise that has been exploited successfully on several occasions in the conception, planning and construction of technically high-grade buildings.

IBM's "Site Services" division plans and controls from the first consulting service to the completion of your project. Implementation is based on consistent project management within the scope of a holistic project responsibility, supported by a standard IBM project method. These are good reasons for trusting in IBM:

- **Holistic solutions** ... make sure that the customer's requirements are considered consistently from planning to realisation
- **High reliability** ... because cost and deadline requirements are met in conformity with the contract.
- **Continuity** ... from consulting to acceptance. The project team's know-how in all areas of building and system integration ensures a high degree of flexibility and competence during the entire course of a project.
- **Guaranteed operability** ... because planning and implementation are integrated under one roof. This ensures successful project conclusion.

The added value for the customer

Thanks to clear customer-oriented project management, IBM's engineers provide you with a tailored solution. Not only can we offer you IBM's traditional solutions in the field of information technology, but also all infrastructural and construction measures. This approach sets in before the usual planning activities. Following a thorough analysis, the optimum approach is coordinated with the customer.

Flexible offering

The offering takes the form of a complete solution. Depending on the requirement, though, a breakdown into individual modules is also possible.

Our services

- New construction
- Conversion
- Renovation
- Modernisation
- Relocation

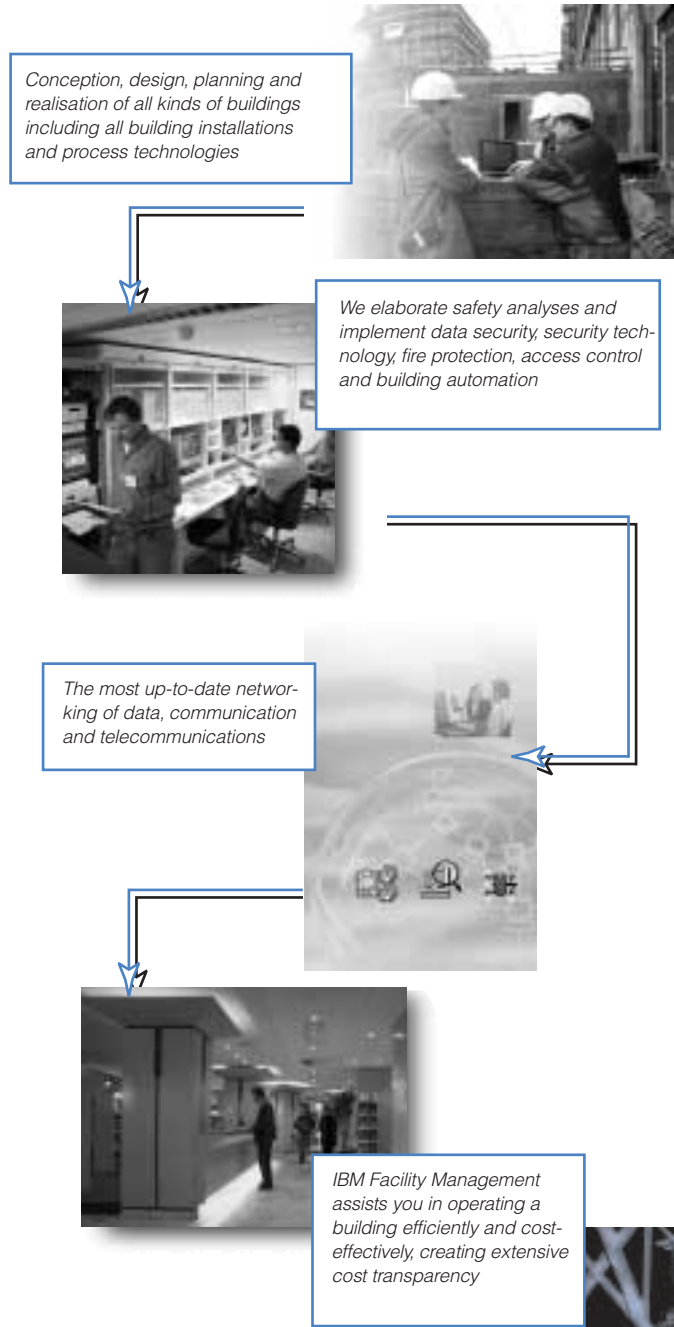

Our solutions

- Studies and consulting
- Architectural and engineering solutions
- General contractorship
- Relocation
- Facility Management
